I know.. LOL...

It is the same RP as the site we were looking at.

PC Lall was the OSC on the site. .. we were looking at the actual tannery that dated back to the early 1900.

A small group of residents were concerned about the tannery and the fact that treated hide remnants were placed

On the river banks all around the river. We heard that there was a landfill too. We never investigated that.

The state\district did not want us there for the tannery and still say they can handle it.

Betsy, are you working in Grand Rapids tomorrow? Can you attend the meeting?

Kim, thanks.

Subject: FW: Request for EPA Presence at Town Hall

Hi Jason,

Lt. Russo with Michigan State police emailed me last night (see below) and followed up with a phone call this afternoon. He indicated that there is an area in Grand Rapids that potentially has contaminated groundwater impacting private wells. He stated that the potential responsible party, Wolverine, has been working with the health department and there is a town hall meeting scheduled for tomorrow. He wanted to know if it would be possible to have someone from EPA in attendance, seated in the audience to observe not as a participant, and that their presence didn't need to be announced. He said he's been getting a lot of phone calls on the issue and requests for someone from the EPA to hear what is going on. The attached flyer has the meeting information.

I told him that I would pass his request on to you to see if you could pass the information on to others who may be interested or are aware of the site. I also have his contact information to pass along if needed:

Lt. Mark A. Russo

District 6 Coordinator

Emergency Management and Homeland Security Division

Michigan State Police

345 Northland Drive NE

Rockford MI 49341

TX: 616-299-9312

Fax: 616-866-3997

Email: RussoM3@michigan.gov

I met Lt. Russo at a conference two years ago. He told me I was the only person he could think to call about this. This is the first time I've had a request like this so I'm hoping I handled it appropriately.

Thank you,

Kim M. Churchill

U.S EPA - Region 5

Grosse Ile, MI

734-692-7618 – Office

734-478-0052 – Cell

Hello,

Forgive me if I'm misinterpreting your question, but we don't have OSCs assigned to specific areas across Michigan. If it is an emergency you can call the Region 5 Spill Hotline at 312-353-2318 and the phone duty officer can answer any questions you may have or send the on-call OSC for assistance.

If you are looking for the contact for a site referral you can provide the details to me, my Section Chief Matt Mankowski, or our Branch Chief Jason El-Zein.

If you are looking for information on a site that EPA is currently working on or worked on in the past it's possible it's being managed by our Remedial Branch (mainly out of Chicago) or our Removal Branch. The OSCs out of Grosse Ile, including myself, work in the emergency response section of the Removal Branch and have sites primarily in Michigan and Ohio.
